NAME	ASIF HUMAYUM	O.NO		RANK:	V/ADM	AGE:	71	YRS
UNIT:		REG.#		WARD:	OPD	DATE	23-02	2024

CECT ABDOMEN WITH CONTRAST

Clinical history: Follow up case of head of pancreas -----Post whipple status (May 2023)

Technique: 5 mm contiguous slices are taken from dome of diaphragm to the iliac crest level.
Oral and IV contrasts are given.

Findings:

- Atelectatic bands are noted in posterior basal segments of bilateral lower lobes
- Significant fat stranding is noted at hepato jejunostomy anastomotic site. Mesenteric fat stranding is noted around mesenteric vessels. Small bowel loops are prominent (towards upper limit of normal 3.0 cm)
- Multiple tortuous vessels are noted at gastro esophageal junction
- Liver is normal in size with smooth outline. Normal intra-and extra hepatic biliary channels identified. CBD is prominent measuring 9.8 mm
- Pancreas, spleen and adrenals are normal in size. No mass is noted.
- Both kidneys are normal in size. No calculus seen. Bilateral mild hydronephrosis is noted (R > L)
- Urinary bladder appears normal. No calculus or mass is seen. Foley catheter is seen in situ
- Mild ascites is noted
- No abdomino-pelvic mass is seen.
- Prostate is enlarged measuring 74 gms with median lobe projecting through base of bladder.
- Peri urethral prostate calcifications are noted

IMPRESSION: Follow up case of head of pancreas -----Post whipple status (May 2023)

- Post surgical changes in sub hepatic and epigastric region as described above. No SMV thrombosis seen on this examination
- Bilateral mild hydronephrosis
- Mild ascites
- Prostatomegaly with periurethral calcifications
