PNS SHIFA KARACHI

NAME: V ADM ASAF HUMMAYUN O.NO: - RANK: - AGE: 70 YRS
UNIT: - REG.# 9032/23 WARD: - DATE: 17.08. 2023

CECT SCAN ABDOMEN AND PELVIS

Clinical history: K/C Ca Head of pancreas. STATUS: Post whipple procedure (May,2023)

Technique: 5mm contiguous slices are taken from dome of diaphragm to pubic symphysis.
Oral and IV contrast is given.

Findings:

- Liver is normal in size shows homogenous parenchyma with smooth outline. Normal intra-and extra hepatic biliary channels identified. CBD, portal vein is normal in caliber.
- Pancreas reveals normal parenchymal texture. No evidence of peripancreatic fat stranding or fluid collection, spleen is normal in size and contour reveals normal enhancement and adrenals are normal morphologically. No mass is noted.
- Sub cm mesenteric and retroperitoneal lymph nodes with intact fatty hila.
- Both kidneys appear normal morphologically. It reveals normal contrast excretion. No solid / cystic mass is seen on either side.
- Urinary bladder shows normal wall thickness. No mass is seen in the lumen.
- Prostate and seminal vesicles are normal.
- Mild fluid collection with surrounding inflammatory changes in sub hepatic region/ at site of surgery. Anastomotic sites i.e. gastric antrum, proximal jejunum and pancreatic body are thick walled and inflamed likely representing post-surgical inflammatory changes
- Atelectatic bands are seen in posterior basal segments of bilateral lower lobes.

IMPRESSION:

K/C Ca Head of pancreas. STATUS: Post whipple procedure (May,2023)

Current scan show mild fluid collection with surrounding inflammatory changes in sub hepatic region/ at site of surgery. Anastomotic sites/gut loops are thick walled and inflamed likely representing post-surgical inflammatory sequelae

No evidence of recurrent/ residual disease process at present
